

COURSE SYLLABUS AND SPECIFICATION

Curriculum title: USEFZ-EaITA-O-I-S-23/24Z						
Course title: algebra liniowa (linear algebra) (PODSTAWOWE)					Course code: US71AIJ2857_14S	
Name of field of study: Economics and IT Applications						
Mode and cycle of study: first-degree, full - time			Profile of study: general academic		Specialty:	
Course / module status obligatory				Language of instruction: semester: 2 - english language		
Year	Semester	Form of instruction	No. of hours		Type of credit	ECTS
				w tym e-learning		
1	2	discussion classes	30	0	pg	4
		lecture	15	0	e	
Total			45			4
Course / module coordinator		dr hab. MAŁGORZATA GUZOWSKA				
Course instructor		dr hab. MAŁGORZATA GUZOWSKA				
Course / module objectives		Completing and revising mathematical knowledge so that the students can successfully study the state-of-art economics, statistics and econometrics as well as other fields of science where economic calculation plays a fundamental role and which deal with best practices in decision-making.				
Prerequisites		<ul style="list-style-type: none"> - knowledge: a candidate demonstrates the knowledge of mathematics on the basic high school level; - skills: a candidate can solve mathematical problems on the elementary level; - competence (attitude): a candidate demonstrates excellent learning skills. 				
LEARNING OUTCOMES						
Category	No.	Code	Description	Ref. to programme benchmarks		
knowledge	1	EP1	Student knows definitions and the elementary properties of linear space.	K_W05		
	2	EP2	Student knows the elementary properties of the real matrixes as well as can recognize and interpret the procedures of solving any system of linear equations.	K_W05		
	3	EP3	Student knows terms and methods related to square forms, eigenvectors and eigenvalues.	K_W05		
skills	1	EP4	Student can use vector and matrices calculus and can apply them to solving the systems of linear equations and simple economic problems.	K_U05		
	2	EP5	Student can examine the properties of quadratic and determine eigenvectors and eigenvalues.	K_U05		
	3	EP6	Student can easily communicate in English in an international group of people in order to carry out mathematical or business tasks.	K_U05 K_U16		
social competences	1	EP7	Student is ready to critically assess his knowledge of mathematical tools and to supplement and deepen his knowledge as well as to use his knowledge and expert knowledge to solve socio-economic problems.	K_K02		
CONTENT					Semester	No. of hours
						w tym e-learning
Subject title: algebra liniowa (linear algebra)						
Format of instruction: lecture						

1. Basic algebraic structures		2	2	0
2. Vector spaces: linear combination and linear independence of vector, bases and dimension for vector spaces.		2	2	0
3. Algebraic operations on matrices and their properties		2	2	0
4. Determinants. Laplace's expansion. Trace and rank of a matrix.		2	2	0
5. Inverse of matrices. Matrices equation.		2	2	0
6. System of linear equations and it solutions.		2	2	0
7. Linear and quadratic forms. Canonical form of a square form. Classification of quadratic forms, Sylvester s law, positive define (negative define) quadratic form. Eigenvalues and eigenvectors and their application in economics.		2	3	0
Format of instruction: discussion classes				
1. Vector spaces: linear combination and linear independence of vector, bases and dimension for vector spaces		2	3	0
2. Algebraic operations on matrices: matrix addition, scalar multiplication, transpose and matrix multiplication.		2	3	0
3. Determinants. Laplace expansion. Properties of the determinant.		2	2	0
4. Inverse of matrices. Matrices equation.		2	4	0
5. Systems of linear equations and methods of solving them (Gaussian elimination, Cramer method, Kronecker - Capelli theorem).		2	6	0
6. Systems of linear inequalities.		2	4	0
7. Linear and quadratic forms. Canonical form of a square form. Classification of quadratic forms, Sylvester s law. Eigenvalues and eigenvectors.		2	4	0
8. Application of linear algebra in economics.		2	4	0
Modes of delivery	Lectures with slides shows. Exercises - problem solving			
Assessment methods				No. of learning outcome from the syllabus
	EGZAMIN PISEMNY			EP1,EP2,EP3
	KOLOKWIUM			EP4,EP5,EP6,EP7
	Metody i formy weryfikacji efektów uczenia si mog zosta zmienione dla studentów ze szczególnymi potrzebami na warunkach i zasadach okre lonych w Regulaminie Studiów Uniwersytetu Szczeci skiego.			
Grading criteria	Credits are given to students who have learned the following skills, by: 5 short one-question (exercise) tests with passing score of 5 -10 points; 1 final test (5 exercises, 10 points each). Total passing score: minimum 25 points under the condition of all the short tests being passed; The examination form and requirements: The final examination tests if a student has achieved all the projected learning outcomes concerning knowledge. It consists of 10 questions. The passing score is 50%. The way of calculating the grade Fail (2.0) 0%-50% Satisfactory (3.0) 51% -60% Satisfactory plus (3.5) 61% - 70% Good (4.0) 71% - 80% Good plus (4.5) 81% - 90% Very good (5.0) 91% -100%			
	Grade calculation principles			
	The final grade is calculated as a weighted average of partial and final tests.			
Final grade calculation method	Sem.	Course	Type of credit	Grade calc. method

Course / module coordinator		dr hab. MAŁGORZATA PORADA-ROCHO				
Course instructor		dr MIRELA ROMANOWSKA				
Course / module objectives		Teach students the ability to search and measure relationships between economic phenomena in business entities and the impact of the environment on their behavior. Understanding and interpretation of using research methods by financial information contained in the financial statements in order to make the right decisions and efficient business management.				
Prerequisites		<ul style="list-style-type: none"> - knowledge - the student knows the basics of accounting, management, business economics, - skills - students can read with understanding basic information such as in the financial statements and other sources, - competence (attitudes) - student has instilled habits of lifelong learning, the ability to work in a group and is prepared to observe and analyze the environment. 				
LEARNING OUTCOMES						
Category	No.	Code	Description	Ref. to programme benchmarks		
knowledge	1	EP1	Student has an understanding of the basic information content of financial statements and reports.	K_W07		
	2	EP2	Student has an understanding of the basic construction rules of evaluation measures phenomena that characterize the company.	K_W07		
skills	1	EP3	Student has the ability to use of basic theoretical knowledge to describe and analyze specific phenomena and processes taking place in the enterprise.	K_U07		
	2	EP4	Student has the ability to the use of appropriate methods to evaluate the effects.	K_U13		
	3	EP5	Student has the ability to use of basic theoretical knowledge to describe and analyze specific phenomena and processes taking place in the enterprise.	K_U07		
social competences	1	EP6	Student has the ability to make decisions and to take any responsibility for them.	K_K04		
CONTENT					Semester	No. of hours
						w tym e-learning
Subject title: analiza ekonomiczna w przedsii biorstwie (economic analysis in enterprise)						
Format of instruction: lecture						

1. The nature and role of analysis in business management.	3	2	0
2. Criteria for the classification of economic analysis methods and their usefulness in the current market conditions.	3	2	0
3. Characteristics of sources of information for economic analysis.	3	1	0
4. A preliminary assessment of the situation of the assets.	3	2	0
5. A preliminary assessment of the situation of the capital.	3	1	0
6. Evaluation of short-term and long-term static liquidity.	3	2	0
7. Cash conversion cycle.	3	2	0
8. The nature and assessment of net working capital.	3	1	0
9. Concept and measurement of profitability.	3	2	0
Format of instruction: discussion classes			
1. Reading the basic financial statements of the selected companies.	3	2	0
2. Methods of economic analysis: logarithm and subsequent substitutions - tasks with two or three factors.	3	2	0
3. A preliminary assessment of the situation the investigated companys assets.	3	2	0
4. A preliminary assessment of the situation the investigated companys capital.	3	2	0
5. Analysis of a company's financial condition - case study.	3	2	0
6. Project presentation.	3	2	0
7. Summarising knowledge.	3	1	0
8. The role of Corporate Social Responsibility in financial analysis - examples.	3	2	0
Format of instruction: laboratory			
1. Study of short-term and long-term financial static liquidity of company X.	3	2	0
2. Establishing and interpretation of the cash conversion cycle (operating, net).	3	2	0
3. Evaluation of net working capital in the company X. Identifying and interpretation of the cash conversion cycle (operating, net).	3	2	0
4. Assessment of the company's profitability.	3	3	0
5. Corporate debt analysis.	3	2	0
6. Analysis of a company's financial condition - case study.	3	4	0
Modes of delivery	Lectures, case study, exercises.		
Assessment methods			No. of learning outcome from the syllabus

Course / module coordinator		dr KAROLINA MUSZY SKA				
Course instructor		dr KAROLINA MUSZY SKA				
Course / module objectives		The goal of the course is to familiarize the student with the theoretical issues of information systems analysis and design and IT tools supporting this field, as well as to help the student acquire the ability to use these tools and utilize the acquired knowledge for analyzing and designing information systems.				
Prerequisites		Basic skills in computer and Internet use.				
LEARNING OUTCOMES						
Category	No.	Code	Description	Ref. to programme benchmarks		
knowledge	1	EP1	Student knows and understands the concepts of information systems analysis and design.	K_W08		
	2	EP2	Student is familiar with the methods of information systems analysis and design and knows how to capture and define requirements.	K_W13		
	3	EP3	Student is familiar with IT tools supporting the analysis and design of information systems.	K_W08		
skills	1	EP4	Student can use the theoretical knowledge to analyze an exemplary information system, to model selected functions and information structures, using appropriate methods and tools.	K_U08 K_U12		
	2	EP5	Student can use the acquired methods and IT tools to design the user's interface for an exemplary system.	K_U08 K_U12		
	3	EP6	Student can easily communicate in English in an international group of people in order to carry out business tasks and projects.	K_U16 K_U18		
social competences	1	EP7	Student is ready to supplement their knowledge and use it to solve issues regarding development of information systems in organizations.	K_K02		
CONTENT					Semester	No. of hours
						w tym e-learning
Subject title: analiza i projektowanie systemów informacyjnych (IS analysis and design)						
Format of instruction: lecture						

1. Introduction to the analysis and design of information systems (concepts, methods, tools).		4	2	0	
2. Methods of gathering, defining and documenting system requirements; modeling the functions and dynamics of the system - use case diagrams.		4	2	0	
3. Modeling the information structures - class/object diagrams.		4	2	0	
4. Modeling the functions and dynamics of the system - activity and sequence diagrams.		4	2	0	
5. Designing the database and physical structure of the system - generating physical data model from class diagram.		4	2	0	
6. Types and principles of designing system user interface.		4	2	0	
7. Alternative approaches to system analysis and design.		4	3	0	
Format of instruction: laboratory					
1. Definition of the design task (characteristics of the organization, organizational structure, problems that require informatization and system goals).		4	2	0	
2. Identification and description of users' requirements, functional structure and system users.		4	2	0	
3. Modeling the functions - use case diagrams.		4	4	0	
4. Modeling the information structures - class diagram.		4	4	0	
5. Modeling the dynamics of the system - activity diagrams.		4	4	0	
6. Interaction diagrams - sequence diagrams.		4	4	0	
7. Design of database and physical structure of the system.		4	2	0	
8. Design of windows form user's interface.		4	4	0	
9. Design of web form user's interface.		4	4	0	
Modes of delivery	multimedia presentations, teamwork, case study, lecture based on multimedia presentations				
Assessment methods				No. of learning outcome from the syllabus	
	KOLOKWIUM			EP1,EP2,EP3	
	PROJEKT			EP4,EP5,EP6,EP7	
	Metody i formy weryfikacji efektów uczenia się mogą zostać zmienione dla studentów ze szczególnymi potrzebami na warunkach i zasadach określonych w Regulaminie Studiów Uniwersytetu Szczecińskiego.				
Grading criteria	Written test verifies the achievement of learning outcomes in terms of knowledge regarding information systems analysis and design, as well as methods and tools supporting this area. To get a positive grade from the test a minimum of 51% of points must be obtained.				
	Project verifies the achievement of learning outcomes on practical skills and teamwork. Projects focus on performing analysis and design for a sample system using the known tools /diagrams. To get a positive grade from the project a minimum of 51% of points must be obtained.				
	Grade calculation principles				
The final grade of the course is a weighted average of the two grades - from the written test (30%) and the project (70%). The pass is granted only in case of positive assessment of both the written test and the project.

6. Exercise on the competitive advantage		2	2	0	
7. Exercise on the implications of the internalization of market position analysis.		2	2	0	
8. Concluding exercise on applying market position analysis of enterprise.		2	3	0	
Modes of delivery	PPT presentation, case studies, discussion based on papers, team work				
Assessment methods				No. of learning outcome from the syllabus	
	KOLOKWIUM			EP1,EP2,EP6	
	PROJEKT			EP3,EP4,EP5	
Metody i formy weryfikacji efektów uczenia si mog zosta zmienione dla studentów ze szczególnymi potrzebami na warunkach i zasadach okre lonych w Regulaminie Studiów Uniwersytetu Szczeci skiego.					
Grading criteria	The final grade of the course will be calculated on the basis of two assignments worth: -50% colloquium (60% points) - open questions -50% poster prepared within groups The condition for passing the exercises is getting a positive grade for a poster. The condition for passing the lectures is getting a positive mark in the test.				
	Grade calculation principles				
	The final grade from the course is equal to the arithmetic mean of grades from the exercises and the lecture.				
Final grade calculation method	Sem.	Course	Type of credit	Grade calc. method	Weight for the average
	2	analiza pozycji rynkowej przedsi biorstw (analysis of enterprises' market position)		Nieobliczana	
	2	analiza pozycji rynkowej przedsi biorstw (analysis of enterprises' market position) [wykład]	zaliczenie z ocen		
	2	analiza pozycji rynkowej przedsi biorstw (analysis of enterprises' market position) [wiczenia]	zaliczenie z ocen

Course / module coordinator		dr DOROTA SKAŁA					
Course instructor		dr AGNIESZKA PRE -PEREPECZO					
Course / module objectives		The goal of this course is to introduce topics that may be used to identify and understand the primary processes taking place within the banking system.					
Prerequisites		The student understands the basic functionality of financial institutions, has an ability to analyse basic processes taking place in the financial sector, understands the need for the continuous study process.					
LEARNING OUTCOMES							
Category	No.	Code	Description	Ref. to programme benchmarks			
knowledge	1	EP1	Student defines and describes the rules and features regarding bank activities.	K_W02			
	2	EP2	The student describes the role of banking system in the economy and its effect on financial stability.	K_W02			
	3	EP3	The student has knowledge of the banking system structure and the effects of its evolution.	K_W02			
skills	1	EP4	The student is able to identify factors shaping the financial situation and market position of banks.	K_U02	K_U17		
	2	EP5	The student is able to analyse basic elements influencing the risk-profitability relation in a bank.	K_U02			
social competences	1	EP6	The student is prepared to clearly present strenghts and weaknesses of individual banks.	K_K01	K_K04		
	2	EP7	The student is interested in further studies and analyses regarding bank activities.	K_K04			
	3	EP8	The student is prepared to act as an active member of a team, analysing the basic characteristics of chosen banks.	K_K01	K_K04		
CONTENT					Semester	No. of hours	
						w tym e-learning	
Subject title: bankowo (banking)							
Format of instruction: lecture							
1. The structure and changes within the modern banking system. Ownership changes. Regulatory framework. The role and types of banks. The role of banking systems in modern economies.					2	3	0
2. Bank funding structures: sources, stability and maturity.					2	2	0
3. Main categories of bank assets and their links with risk and profitability.					2	2	0

4. Assets and liabilities management in banking. Bank risk - credit risk, liquidity risk, market risk and operational risk.		2	4	0
5. Bank capital, capital adequacy, Basle I, II and III agreements.		2	2	0
6. The banking system and the financial safety net. Banking supervision and deposit insurance systems. Moral hazard problems.		2	2	0
Format of instruction: discussion classes				
1. The analysis of changes in the modern banking systems. Privatisation, nationalisation and shareholder structure, private versus public banks - discussion.		2	2	0
2. Bank balance sheet and income statement analysis.		2	4	0
3. Main elements of the asset and liability transactions and intermediation functions of commercial banks, banking activities within the regulatory framework.		2	2	0
4. Bank risk - credit risk (case study).		2	2	0
5. Market risk and capital adequacy: problem solving, calculations.		2	2	0
6. Student presentations - analysis of chosen banks, in the context of their shareholder structure, size, market position, profitability and risk.		2	2	0
7. Summary and final conclusions.		2	1	0
Modes of delivery	Powerpoint presentations, text analysis and discussion, team projects (student presentations)			
Assessment methods				No. of learning outcome from the syllabus
	KOLOKWIUM			EP1,EP2,EP3

Course / module coordinator		dr AGATA WAWRZY尼亚K				
Course instructor		dr AGATA WAWRZY尼亚K				
Course / module objectives		The aim of the course is transferring knowledge of design methodology for relational database; developing skills in modeling relational databases and implementation in MS SQL Server environment. The aim of the course is also preparing students for using databases in economic applications.				
Prerequisites		Skills: student is computer literate and works in Microsoft Windows operating environment; Competencies: student is able to work in a team, has deep-rooted habits of lifelong learning and consciously benefits from information technologies. Knowledge: student has a general knowledge of functioning of economic entities;				
LEARNING OUTCOMES						
Category	No.	Code	Description	Ref. to programme benchmarks		
knowledge	1	EP1	Student has knowledge concerning functioning and construction of databases.	K_W13		
	2	EP2	Student mastered the knowledge in the scope of: database design, data structure, database normalization.	K_W13		
	3	EP3	Student knows the Structured Query Language (SQL) basic concepts and principles.	K_W13		
skills	1	EP4	Student demonstrates the ability to practical use of the database in economic applications.	K_U12		
	2	EP5	Student can independently design the structure of relational database model.	K_U12		
	3	EP6	Student implements physical database model in MS SQL Server.	K_U12		
	4	EP7	Student is able to generate queries in SQL, create forms and reports.	K_U12		
social competences	1	EP8	Student is ready to participate in the preparation of projects in a team.	K_K01

Metody i formy weryfikacji efektów uczenia się mogą zostać zmienione dla studentów ze szczególnymi potrzebami na warunkach i zasadach określonych w Regulaminie Studiów Uniwersytetu Szczecińskiego.					
Grading criteria	Form and requirements of exercise and laboratory credit: - students are assessed by means of test (exercises) and the group project (laboratory), which verify achievement of educational effects of skills, - a lecture mark is identical with an exam mark. Form and requirements of exam: - students are assessed by means of oral exam (2 questions) which allows to verify of achievement of educational effects of knowledge (after drawing of questions students have some minutes to prepare their answers).				
	Grade calculation principles				
	Final grade of the course: - student can be granted a satisfactory credit when he is able at least to discuss problems related to statistical regularities, formulation of model hypothesis, estimation of structural parameters and verification of econometric models, as well as solve assignments related to these issues, - the final mark is equal to a weighted average calculated from three partial marks: exercises (weight 0,3), laboratory (weight 0,3) and exam (weight 0,4).

2. Capitalizations of simple, compound, continuous. The intensity of interest. The capitalization of the variable interest rate. Simple and compound discounts.		3	2	0	
3. Interest rates - concepts and types. The rate of return. Nominal rate, effective, real. Methods for estimating the discount rate.		3	2	0	
4. Rent account (the current value and future cash flows). Annuity century. Create a pension fund. Fixed Annuities, growing in arithmetic and geometric progression. Annuities generalized.		3	2	0	
5. Schedules for repayment of loans. Debt cancellation plans. Rules repayment. Fixed repayment installments combined. Conversion and debt consolidation.		3	2	0	
6. The use of mathematical finance fixed assets in the economy. Review of methods evaluate the effectiveness of investment projects. Dynamic methods of evaluation of investment projects.		3	2	0	
7. Fundamentals of actuarial calculation. Calculation of insurance premiums.		3	3	0	
Format of instruction: discussion classes					
1. Introduction to time value of money. Percentage of simple and complex. Determining the value of current and future.		3	4	0	
2. The possibilities of using basic formulas in Excel spreadsheet for determining the current and future value. Determination of the effective rate.		3	2	0	
3. Nominal rate, effective and real rate. Equivalent rate. The intensity of interest. The capitalization of the variable interest rate.		3	2	0	
4. Discount rate methods.		3	2	0	
5. Sequences of payment. Annuities compatible and incompatible. Fixed annuity amount. Annuities forming an arithmetic progression, forming a series of geometric pension, annuity generalized.		3	4	0	
6. Compatible and incompatible annuities. Arithmetic and geometric annuities.		3	2	0	
7. Construction of annuity repayment plan with decreasing and selected rate.		3	4	0	
8. The principle of equivalence and installment debt, loan schemes. Conversion. Loans with grace period. Consolidation.		3	4	0	
9. Conversion of debt. Loans with grace period. Consolidation.		3	2	0	
10. Dynamic measures of evaluation of investment projects.		3	4	0	
Modes of delivery	The course comprises lectures with a presentation of research of economic and financial developments and simulations, exercises, and labs - work individually and in groups.

Course / module coordinator		dr hab. TOMASZ BERNAT					
Course instructor		dr hab. TOMASZ BERNAT					
Course / module objectives		The aim is to present the basic issues of microeconomics course, in particular the functioning of individual markets, the behavior of individual entities, micro-economic theory of choice: consumers and businesses, the basic conceptual methods and tools for the analysis of micro-economic activities of economic agents.					
Prerequisites		The student knows the basics of economics and the principles of market economy, student is orientated in current economic events. Students are able to solve the basic tasks of mathematics and use (properly interpreted) graphs showing the relationship between the main categories, which are subject to economic analysis. The student is able to think analytically, properly formulate conclusions based on their knowledge of the news of economic life.					
LEARNING OUTCOMES							
Category	No.	Code	Description	Ref. to programme benchmarks			
knowledge	1	EP1	Student knows basic methodology allowed to analysis basic economic events.	K_W01 K_W03 K_W07			
skills	1	EP2	Students can predict possible scenarios come from different issues from market and can assess company situation in different market structure.	K_U01 K_U05 K_U07			
social competences	1	EP3	Student can think in creative and innovative way and easily communicate in English in an international group of people in order to carry out business tasks and projects.	K_K01 K_K02 K_K04			
CONTENT					Semester	No. of hours	
Subject title: mikroekonomia (microeconomics)							
Format of instruction: lecture							
1. Introduction to microeconomics					2	3	0
2. Theory of demand and supply					2	2	0
3. Market equilibrium and its changes					2	2	0
4. Company choice - theory of production					2	2	0
5. Costs, revenue and profits					2	2	0

6. Optimal choice of company		2	2	0	
7. Market structure - perfect competition		2	2	0	
Format of instruction: discussion classes					
1. Introduction to microeconomics		2	3	0	
2. Economics theory of human behaviour		2	3	0	
3. Theory of demand and supply		2	3	0	
4. Market equilibrium and its changes		2	3	0	
5. Company choice - theory of production		2	3	0	
6. Costs, revenue and profits		2	3	0	
7. Optimal choice of company		2	3	0	
8. Market structure - perfect competition		2	3	0	
9. Market structure - imperfect competition		2	3	0	
10. The case studies analysis		2	3	0	
Modes of delivery	Main form of knowledge transfer is lectures with case studies. The main way of exercises is case studies solving, also discussions, graphic and algebraic tasks.				
Assessment methods				No. of learning outcome from the syllabus	
	EGZAMIN PISEMNY			EP1	
	KOLOKWIUM			EP1	
	PREZENTACJA			EP1,EP2,EP3	
Metody i formy weryfikacji efektów uczenia się mogą zostać zmienione dla studentów ze szczególnymi potrzebami na warunkach i zasadach określonych w Regulaminie Studiów Uniwersytetu Szczecińskiego.					
Grading criteria	Credit for classes: - Students are assessed on the basis of written colloquia and presentation.				
	Credit for lectures: students are assessed on the basis of a written exam covering the verification of knowledge based on case studies (50% points) and theory (50% points), for checking the knowledge of the basic principles of the functioning of markets and corporate entities (consumers , businesses).				
	Rating: - The student receives a satisfactory grade - if he can provide some basic definitions of terms related to microeconomics and solve simple algebraic tasks. - The student is given a score good - when also can define the basic relationships occurring in different markets , as well as to solve problems in which it can represent causal relationships that take place in the markets. - The student receives a very good - if also able to predict the likely impact of events taking place in the markets , as well as able to solve case studies that require proper to anticipate effects of events occurring in the markets.				
Grade calculation principles					
The final course grade is the arithmetic mean of the exercise and lecture grades.					
Final grade calculation method	Sem.	Course	Type of credit	Grade calc. method	Weight for the average

	2	EP3	Student is able to plan the simulation experiments and interpret the results.	K_U10			
social competences	1	EP4	Student is ready to formulate his own ideas for solving business problems using methods and tools for modeling and simulation of processes.	K_K04			
CONTENT					Semester	No. of hours	
						w tym e-learning	
Subject title: modelowanie i symulacje w analizie biznesowej (computer aided modelling and simulation)							
Format of instruction: lecture							
1. Introduction to computer simulation. Basic concepts and definitions					5	3	0
2. System Dynamics as the technique of continuous simulation					5	6	0
3. Techniques of discrete simulation					5	2	0
4. Languages and tools of computer simulation					5	2	0
5. An overview of applications of computer simulation methods for economic and business problems solving (case studies)					5	2	0
Format of instruction: laboratory							
1. Discussion on character of causal relationships appearing in economic objects					5	2	0

2. Acquisition of ability to work in simulation package environment		5	4	0	
3. Constructing and solving simulation models in simulation package environment for specific decision-making problems (practical tasks)		5	7	0	
4. Evaluation of achieved educational effects		5	2	0	
Modes of delivery	Lectures: multimedia presentation Laboratories: discussion, case studies, performing simulation experiments, the development of the project, working in groups.				
Assessment methods				No. of learning outcome from the syllabus	
	SPRAWDZIAN			EP1	
	ZAJ CIA PRAKTYCZNE (WERYFIKACJA POPRZEZ OBSERWACJ)			EP2,EP3,EP4	
	Metody i formy weryfikacji efektów uczenia si mog zosta zmienione dla studentów ze szczególnymi potrzebami na warunkach i zasadach okre lonych w Regulaminie Studiów Uniwersytetu Szczeci skiego.				
Grading criteria	Lectures: grade based on a written test. Laboratories: the number of points received for the realization of individual and group projects (max. 20 points): for 20 points: 5,0; 18-19: 4,5; 16-17: 4,0; 14-15: 3,5; 12-13: 3,0, 11 and under: 2.0) - mark from the laboratories.				
	Grade calculation principles				
	The condition for obtaining the final grade is to pass lectures and laboratories at a minimum 3.0. The final grade of the course results from the arithmetic mean of all grades obtained for lectures and laboratories.				
Final grade calculation method	Sem.	Course	Type of credit	Grade calc. method	Weight for the average

Course / module coordinator		dr AGATA WAWRZY尼亚K					
Course instructor		dr BARBARA W SIKOWSKA					
Course / module objectives		The aim of the course is to familiarise the student with the important role of information technology (IT) in modern business and marketing (in the context of improving productivity and saving costs). IT and marketing work together to maximise a company's marketing potential. The student will acquire skills to use various IT technologies and tools (CRM, CMS, analytical and reporting tools, marketing automation, big data, mobile applications, etc.) which are increasingly being used by marketers. The student will acquire competences in IT in order to implement necessary software to support marketing activities.					
Prerequisites		Basic knowledge of marketing and information technologies.					
LEARNING OUTCOMES							
Category	No.	Code	Description	Ref. to programme benchmarks			
knowledge	1	EP1	Student understand the important role of IT in marketing (in keeping abreast of changing technologies).	K_W15			
	2	EP2	Student describes various IT tools to store and analyse data in the marketing information system.	K_W15			
skills	1	EP3	Student can compare and contrast different IT tools allowing to conduct advertising and promotional campaigns.	K_U08			
	2	EP4	Student is able to collect, analyze, process and critically assess the usefulness of marketing information obtained via the Internet.	K_U04			
social competences	1	EP5	Student is able to establish contacts and to function on the Internet being aware of threats resulting with limitations of social media.	K_K05			
CONTENT					Semester	No. of hours

2. Macroeconomic conditions of innovative projects		4	1	0	
3. Strategies for innovation in the enterprises		4	2	0	
4. Risk and uncertainly in innovative projects		4	2	0	
5. Financing of innovative projects		4	2	0	
6. Methods of assessment of innovative projects		4	2	0	
7. Evaluation and criteria for success of innovative projects financed form public funds		4	2	0	
8. Evaluation and criteria for success of innovative projects funded by provate sector		4	2	0	
Format of instruction: laboratory					
1. Types, systematics and functions of asset in innovative projects		4	2	0	
2. Analysis of the market and competition		4	2	0	
3. Protection against the risk of an innovative project		4	2	0	
4. Sources of financing of innovative projects		4	2	0	
5. The process of innovation in the enterprises		4	2	0	
6. Innovative projects - case studies		4	4	0	
7. Calculation of the effectiveness of innovative projects		4	1	0	
Modes of delivery	Lecture with audiovisual aids, discoussions, case study analysis				
Assessment methods				No. of learning outcome from the syllabus	
	KOLOKWIUM			EP1,EP2	
	PREZENTACJA			EP7	
	PROJEKT			EP3,EP4,EP5,EP6	
Metody i formy weryfikacji efektów uczenia si mog zosta zmienione dla studentów ze szczególnymi potrzebami na warunkach i zasadach okre lonych w Regulaminie Studiów Uniwersytetu Szczeci skiego.					
Grading criteria	Credit for laboratory classes: the execution of a final essay: preparation of the project and its presentation or research and presentation of the results - the project is testing the achievement of learning outcomes in terms of skills.				
	Credit for lectures: evaluation of the lectures is obtained form the test - a written test of the learning outcomes achieved in terms of knowledge gained during participation in lectures and excercises.				
	The student receives a satisfactory grade, when he can discuss the basic knowledge of evaluation of the innovative projects, their financing, organization and requirements, which checks the achieved learning outcomes in terms of knowledge and skills obtained through participation in lectures and exercises.				
Grade calculation principles					
Final grade od the course is the average of the grades obtained for lectures and laboratory classes.					
Final grade calculation method	Sem.	Course	Type of credit	Grade calc. method	Weight for the average
	4	ocena przedsi wzi innowacyjnych (innovative initiative evaluation)		Arytmetyczna	
	4	ocena przedsi wzi innowacyjnych (innovative initiative evaluation) [wykład]	zaliczenie z ocen		
	4	ocena przedsi wzi innowacyjnych (innovative initiative evaluation) [laboratorium]	zaliczenie z ocen

Course / module coordinator		dr DOROTA SKAŁA				
Course instructor		dr DOROTA SKAŁA				
Course / module objectives		The goal of this course is to introduce and describe the main institutions, markets and processes in the financial system, both on a national and international level.				
Prerequisites		The student has basic knowledge of the social and political framework, as well as a basic understanding of the business environment; is capable of solving basic mathematical problems; is able to use academic sources from both the internet and the literature.				
LEARNING OUTCOMES						
Category	No.	Code	Description	Ref. to programme benchmarks		
knowledge	1	EP1	The student has knowledge of the position of finance within the general economic environment and of its links to other disciplines (such as sociology and law), while understanding the main processes, categories and instruments within finance.	K_W02		
	2	EP2	The student has knowledge of the basic rules of financial system functioning, mainly with respect to financial and non-financial institutions (of the private and public sector) and its relations with the real economy.	K_W02		
	3	EP3	The student understands the role of money in the economy and the money creation mechanism.	K_W02		
skills	1	EP4	The student is able to correctly interpret the money creation process in the modern economy, including its sources and link this to macroeconomic outcomes.	K_U01 K_U02		
	2	EP5	The student is able to identify the perspectives and challenges related to changes within modern financial processes, including changes of institutions and markets.	K_U01		
	3	EP6	The student has basic skills of analysing the role of financial instruments usage by financial and non-financial institutions.	K_U01		

social competences	1	EP7	The student is capable to identify basic ethical dilemma relating to using financial instruments in the private and public sector, in the context of the moral hazard problem.	K_K01	
	2	EP8	The student is prepared to communicate and present basic knowledge on the rules of functioning of the modern financial system.	K_K01	
	3	EP9	The student is interested in further studies and perfecting skills in the field of finance.	K_K01 K_K02

LEARNING OUTCOMES							
Category	No.	Code	Description	Ref. to programme benchmarks			
knowledge	1	EP1	Student knows the essence of the consumer behaviour. Student explains the importance of consumer behaviour as an important factor influencing the operation of the market entities.	K_W04			
skills	1	EP2	The student can search for solutions to the issues which are discussed by using his knowledge and evaluate consumer behaviour. He is involved in the implementation of team tasks and can freely communicate in English in an international team.	K_U04 K_U16 K_U17			
social competences	1	EP3	Student is ready to prepare and carry out consumer behaviour tasks and projects. The student has criticism of unfair market practices designed to manipulate the consumer.	K_K01 K_K02

Course instructor		dr DOMINIK ROZKRUT					
Course / module objectives		The aim of the course is to acquire basic knowledge on a quantitative description of economic and social phenomena as well as ability to present the results of research, based on primary or secondary data.					
Prerequisites		<ul style="list-style-type: none"> - knowledge of basic economic concepts, - knowledge and abilities from the "Mathematics" module 					
LEARNING OUTCOMES							
Category	No.	Code	Description	Ref. to programme benchmarks			
knowledge	1	EP1	Student knows the parameters describing the socioeconomic characteristics, their properties, measurement scales, student knows how to describe dynamics and relationships.	K_W10			
	2	EP2	Student knows the research methods in the social sciences and methods of measurement specific for social and economic sciences.	K_W06 K_W10			
	3	EP3	Student knows the methods of presentation of the study of primary and secondary data, taking into account characteristics of the populations and distributions.	K_W06 K_W10			
skills	1	EP4	Student is able to quantitatively describe the socio-economic phenomena on the basis of both primary and secondary data.	K_U06 K_U10 K_U15			
	2	EP5	Student is able to estimate strength and direction of relationships.	K_U05 K_U06 K_U10			
	3	EP6	Student is able to describe dynamics of phenomena, use economic indices.	K_U05 K_U10			
social competences	1	EP7	Student is ready to use results of surveys conducted by national statistical institutes, including acknowledging the importance and consequences of cooperation with public statistics institution.	K_K02			
CONTENT					Semester	No. of hours	
							w tym e-learning
Subject title: statystyka opisowa (descriptive statistics)							

Format of instruction: lecture			
1. Types of statistical surveys, definition of statistical unit, population and sample, statistical surveys; types of variables, measurement scales, methods of data presentation, measurement scales. The structure of mass processes.	1	2	0
2. One-dimensional populations, empirical distributions, moments and quantiles for metric scales, measures of central tendency, measures of dispersion, measures of skewness, measures of kurtosis.	1	3	0
3. Correlation coefficients, Chi2, variance equality. Multidimensional analysis, partial correlations.- dimensional populations, tables, ranks, types of relationships.	1	4	0
4. Empirical and theoretical regressions, the method of least squares for linear regression, measures of regression fit.	1	2	0
5. Measurement of dynamics of economic and social phenomena. Time series, chronological mean. Analysis of shortterm changes, individual indices, the average rate of change, average absolute change. Aggregate indexes. Price indices. Aggregate indices for relative values.	1	2	0
6. Decomposition of time series, trend and seasonality. Linear and exponential trend. Additive and multiplicative seasonality.	1	2	0
Format of instruction: discussion classes			
1. Statistics, populations, data, notation, tables and charts, measurement scales. Measures of central tendency, dispersion, skewness, kurtosis.	1	5	0
2. Correlation and regression analysis: - correlation series and contingency table, - correlation coefficients: Tschuprow's, Spearman's rank, correlation ratios, Pearson product-moment correlation coefficient, - empirical and theoretical regression lines.	1	5	0
3. Analysis of dynamics: - short-term analysis: differences and indexes, - long-term analysis: analysis of trends and seasonality.	1	5	0
Format of instruction: laboratory			
1. Statistics, populations, data, notation, tables and charts, measurement scales. Measures of central tendency, dispersion, skewness, kurtosis.	1	5	0
2. Correlation and regression analysis: - correlation series and contingency table, - correlation coefficients: Tschuprow's, Spearman's rank, correlation ratios, Pearson product-moment correlation coefficient, - empirical and theoretical regression lines.	1	5	0
3. Analysis of dynamics: - short-term analysis: differences and indexes, - long-term analysis: analysis of trends and seasonality.	1	5	0
Modes of delivery	The course comprises lectures using (where appropriate) transparencies / presentations of research of socioeconomic phenomena, exercises and laboratories - working individually and in groups.		
Assessment methods			No. of learning outcome from the syllabus

	KOLOKWIUM		EP4,EP5,EP6
	PROJEKT		EP4,EP5,EP6,EP7
Metody i formy weryfikacji efektów uczenia si mog zosta zmienione dla studentów ze szczególnymi potrzebami na warunkach i zasadach okre lonych w Regulaminie Studiów Uniwersytetu Szczeci skiego.			
Grading criteria	<p>The form and terms of the lectures: A written exam consisting of 7 single-choice and 3 multiple-choice test questions. The exam tests the knowledge of students. Students can obtain up to 10 points. There are the following thresholds for grades: Grade 3.0 - at least 5 points. Grade 3.5 - 7 points. Grade 4.0 - 8 points. Grade 4.5 - 9 points. Grade 5.0 - 10 points.</p> <p>The form and terms of the exercises: Students are assessed on the basis of two written tests covering writing skills verification based on solving tasks of choosing appropriate descriptive characteristics, their determination and interpretation of detailed series and aggregated data to a series of interval and correlation tables (students during the tests can benefit from standardised statistical tables). The students' results at each test are presented as the percentage of total number of points that can be obtained. The final grade for exercises is calculated as the arithmetic mean of percentages obtained for both tests. The thresholds for grades are as follows: Grade 3.0 - at least 50%. Grade 3.5 - at least 70%. Grade 4.0 - at least 80%. Grade 4.5 - at least 90%. Grade 5.0 - at least 95%.</p> <p>The form and terms of the laboratories: A project to achieve the learning outcomes tested on practical skills and social competences. Project is done in groups of 2-3 students. Students must perform full statistical research: specify the goal, collect statistical data, graphically present the data, apply appropriate analytical methods, interpret the results and draw conclusions. Projects are assessed with respect to their completeness and correctness. The thresholds for grades are as follows:</p>		

Grade 3.0 - at least 50%. Grade 3.5 - at least 70%. Grade 4.0 - at least 80%. Grade 4.5 - at least 90%. Grade 5.0 - at least 95%.
Grade calculation principles
The final grade is a simple arithmetic mean of the grades obtained from the lecture, classes and laboratories.

Subject title: systemy pozyskiwania danych (data acquisition systems)						
Format of instruction: lecture						
1. Definition of information, types and functions of information in economy. Economics of information. Information processes and data acquisition techniques. Types of statistical surveys.				1	2	0
2. Data structures. Electronic data exchange protocols.				1	2	0

3. State information infrastructure. Main resources of state information infrastructure. Functions of state information systems.		1	2	0	
4. The role of public statistics system in the state information infrastructure. Legal basis for the functioning of the public statistics system in Poland and the European Union. Structure and organization of public statistics system in Poland and the European Union. Structure and organization of public statistics system in Poland. European Statistical System.		1	2	0	
5. Statistical research programme of public statistics, European statistical programme.		1	2	0	
6. Information resources of international organizations.		1	2	0	
7. Commercial data sources, domain information systems. Specialized data search tools. Assessment of sources reliability and data quality.		1	3	0	
Format of instruction: discussion classes					
1. Defining information needs. Searching for information resources. Examples of statistical databases systems.		1	2	0	
2. Methods of gathering, processing and storing data. Statistical meta information and para information systems.		1	2	0	
3. Geographic Information System (GIS).		1	2	0	
4. Information resources of Polish public statistics.		1	2	0	
5. Information resources of international organizations: International Monetary Fund, World Trade Organization, The Organisation for Economic Co-operation and Development, World Bank, Bank for International Settlements, United Nations.		1	2	0	
6. Information resources of the commercial and domain databases.		1	2	0	
7. Internet as a data source. Assessment of sources reliability and data quality.		1	3	0	
Modes of delivery	The course uses lectures with (when needed) multimedia presentations of statistical surveys of socio-Metody kształcenia economic processes and lab classes based on individual and group work covering practical assignments related to collecting, processing and storing data.				
Assessment methods				No. of learning outcome from the syllabus

Course / module coordinator		dr in . MARCIN MASTALERZ				
Course instructor		prof. dr hab. ZYGMUNT DR EK				
Course / module objectives		The aim of the course is to show the possibility of using a computer to formalization of decision-making situations, their modeling and simulation, and usage of software tools and environments, which, on the modulu: basis of qualitative and quantitative data support the decisions of managers on the different levels of management.				
Prerequisites		Knowledge of the basics of computer science, general knowledge of the functions and application areas of information systems management, good knowledge of spreadsheets.				
LEARNING OUTCOMES						
Category	No.	Code	Description	Ref. to programme benchmarks		
knowledge	1	EP1	Student has basic knowledge in the area of methods and decision support tools, that, on the basis of the analysis of qualitative and quantitative data, support managers at various levels of the enterprise management.	K_W10		
skills	1	EP3	Student uses tools to analyze quantitative and qualitative data for decision support.	K_U10 K_U14		
	2	EP4	Student can easily communicate in English in an international group of people in order to carry out business tasks and projects	K_U16		
social competences	1	EP2	Student is ready to broaden their knowledge to solve social and business problems using decision models and decision support systems.	K_K02		
CONTENT				Semester	No. of hours	
						w tym e-learning
Subject title: systemy wspomagania decyzji (decision support systems)						
Format of instruction: lecture						
1. The types of decisions at different levels of management, approaches for their formalization, information in decision-making, Decision Support Systems (DSS) - definitions, functions and characteristics of their components.				3	2	0
2. The process of decision-making situations modeling. Computer analysis of economic systems.				3	2	0
3. Study of the applicability of the software to support the digital modeling of economies and decision-making situations. The DSS, EIS MSS systems and the role of data banks, methods, models and knowledge in decision support. Integrated decision support system.				3	3	0
4. Problems of multidimensional structures mapping and hierarchical consolidation of the results in decision support systems. data warehouses in supporting the decisions. The usage of technology ETL, OLAP and Data Mining.				3	2	0

5. Business Intelligence technology and Business Intelligence applications in supporting the management and delivery of information. Characteristics of the BI market in the world and in Poland.		3	2	0	
6. Corporate Performance Management systems and the use of web technologies in supporting decisions in the company.		3	2	0	
7. Artificial intelligence and expert systems as a class of systems based on the knowledge.		3	2	0	
Format of instruction: laboratory					
1. The division into groups of 2-3 persons for a description of the enterprise to which developed models and application of program tools will be applied.		3	2	0	
2. Computer modeling of decision making problems based on qualitative and quantitative data relying on the Naylor procedure.		3	4	0	
3. Computer modeling of qualitative multi-criteria decision-making problems based on AHP (Analytic Hierarchy Process) and ELECTRE.		3	3	0	
4. Design and generation of decision support analysis for the different management levels.		3	2	0	
5. Examples of the use of the data warehouses.		3	2	0	
6. Assessment.		3	2	0	
Modes of delivery	Lectures with multimedia presentations. Laboratories carried out with the use of appropriate software applications and e-learning system.				
Assessment methods				No. of learning outcome from the syllabus	
	SPRAWDZIAN			EP1,EP2	
	PROJEKT			EP3,EP4	
	Metody i formy weryfikacji efektów uczenia się mogą zostać zmienione dla studentów ze szczególnymi potrzebami na warunkach i zasadach określonych w Regulaminie Studiów Uniwersytetu Szczecińskiego.				
Grading criteria	<p>Credit for laboratory classes: Students are assessed on the basis of partial projects sent by the e-learning system. Such projects will be included in the final project. Sub-projects will be built on the basis of substantive and technical knowledge (regarding skills of using the computer applications) gained in laboratories during the realization of the thematic blocks (30% points of the final grade). Final project, expanded according to the guidelines provided in the lecture, will be presented by students in groups (40% points of the final grade).</p> <p>Credit for lectures: it is based on test. Knowledge test will be carried out using the e-learning platform (30% points of the final grade).</p> <p>Rating: - The student receives a satisfactory grade when he is familiar with elements of the decision-making process, the categories of decisions and he can build a decision model based on the Naylor procedure using computer tools. - The student receives a good grade if he can also use selected domain computer tools in supporting decision. - The student receives a very good grade if he can also use this knowledge to build the concept of integrated decision support system as application of the lecture theses.</p>				
	Grade calculation principles				
	Final grade of the course is calculated on the basis of the grades from the laboratory classes (70%) and lectures (30%).

Category	No.	Code	Description	Ref. to programme benchmarks			
knowledge	1	EP1	Student knows the properties of estimators describing population structure and parameters describing dependencies between variables and properties of their distributions.	K_W08 K_W10			
	2	EP2	Student knows methods of obtaining estimators.	K_W06 K_W10			
	3	EP3	Student knows the stages of verification of statistical hypotheses in the social sciences.	K_W10			
skills	1	EP4	Student can choose model of estimation and make an estimation of parameters describing the structure of the collectivity and interdependence parameters, including model assumptions.	K_U06 K_U10			
social competences	1	EP5	Student is able to carry out a verification of statistical hypotheses concerning distribution parameters describing the structure of population and occurrence of dependencies.	K_K01 K_K02			
	2	EP6	Student appreciates the importance and consequences of cooperation with the departments of public statistics in the study conducted by a representative method.	K_K02			
CONTENT					Semester	No. of hours	
						w tym e-learning	
Subject title: wnioskowanie statystyczne (statistical inference)							
Format of instruction: lecture							
1. Transformations of random variables, linear transformations of variables with normal distribution. Nonlinear transformations of variables with normal distribution.					2	2	0

2. Sampling, simple samples.		2	2	0	
3. Point estimation assumptions, estimators - their properties and distributions. Error of estimator. Estimates of estimators and errors of estimators. Interval estimation.		2	3	0	
4. Methods of obtaining estimators - method of maximum likelihood, method of moments.		2	2	0	
5. Concept and types of statistical hypotheses, I and II type error in the hypotheses verification, critical regions of the tests.		2	2	0	
6. Parametric tests, testing stages, test for the parameters describing structures, correlation and regression coefficients significance tests.		2	2	0	
7. Nonparametric tests: tests of compliance with a hypothetical distribution, test of randomness, test of two structures compatibility (Kolmogorov-Smirnov).		2	2	0	
Format of instruction: discussion classes					
1. Interval and point estimation in the structure analysis. Error and accuracy of estimation.		2	6	0	
2. Interval and point estimation in the interdependence analysis.		2	6	0	
3. The maximum likelihood method. The method of moments.		2	2	0	
4. Verification of parametric hypothesis in the analysis of structures, tests of means, fractions, variance. Stages of verification of statistical hypotheses. The critical regions of tests.		2	6	0	
5. Verification of parametric hypothesis in the analysis of interdependence. Tests of significance.		2	4	0	
6. Nonparametric tests of empirical distributions compatibility with a normal distribution (Kolmogorov compatibility tests), test of independence.		2	2	0	
7. Repetition and summary of the subject material.		2	4	0	
Modes of delivery	The course comprises lectures using (where appropriate) transparencies/presentations concerning random variables and exercises - working individually and in groups.				
Assessment methods				No. of learning outcome from the syllabus	
	KOLOKWIUM			EP1,EP2,EP3	
	SPRAWDZIAN			EP4,EP5,EP6	
Metody i formy weryfikacji efektów uczenia si mog zosta zmienione dla studentów ze szczególnymi potrzebami na warunkach i zasadach okre lonych w Regulaminie Studiów Uniwersytetu Szczeci skiego.					
Grading criteria	Assessment form of classes content: - Students are assessed on the basis of three written tests covering writing skills verification based on solving practical tasks of interval estimation and verification of parametric and nonparametric hypotheses according to the material provided on exercises (students can use standardized statistical tables and formulas). Coursework must be included for a minimum of 60%. Assessment form of lectures content: - written test concerning knowledge of the effects 01, 02, 03. This includes open-ended questions relating to analytical examples related to research conducted by the Central Statistical Office by representative method (effect 07), in which the student must demonstrate knowledge of the principles necessary to drive the estimation and verification of statistical measures. During the test students may use the standardized statistical tables and formulas.				
	Grade calculation principles				
	The final grade is the arithmetic mean of the grades for the lectures and for classes.				
Final grade calculation method	Sem.	Course	Type of credit	Grade calc. method	Weight for the average

8. Constructing queries, designing forms and reports - exercises		5	10	0	
9. Summary of knowledge on information management and overview of developed projects		5	2	0	
Modes of delivery	online presentations developed jointly by students, online tutorial regarding database creation and management				
Assessment methods				No. of learning outcome from the syllabus	
	KOLOKWIUM			EP1,EP2	
	PROJEKT			EP4,EP5	
	ZAJ CIA PRAKTYCZNE (WERYFIKACJA POPRZEZ OBSERWACJ)			EP1,EP2,EP4	
	Metody i formy weryfikacji efektów uczenia si mog zosta zmienione dla studentów ze szczególnymi potrzebami na warunkach i zasadach okre lonych w Regulaminie Studiów Uniwersytetu Szczeci skiego.				
Grading criteria	Student is evaluated on the basis of a written test, a project of designing and implementing a database and performing indicated tasks during the course. To get a positive grade from the test the student must get at least 51% of points. The same applies to the project. Performing 100% of course tasks raises the final grade by half grade. Performing 80-99% of course tasks has no influence on the final grade. Performing 60-79% of course tasks lowers the final grade by half grade. Performing less then 60% of course tasks lowers the final grade by one grade.				
	Grade calculation principles				
	The final grade is an arithmetic average of the test and the project grades and can be additionally influenced by the performance of course tasks, as explained in the conditions for obtaining a pass.				
Final grade calculation method	Sem.	Course	Type of credit	Grade calc. method	Weight for the average

Course / module coordinator		dr KRZYSZTOF DMYTRÓW				
Course instructor		dr KRZYSZTOF DMYTRÓW				
Course / module objectives		Goal of the course/module: to teach students handling of statistical software such as Analysis ToolPak and R language, especially in order to recognise and analyse statistical regularities of economic variables distributions, correlations between variables and dynamics of variables observed in many markets.				
Prerequisites		1. Knowledge: a knowledge of descriptive statistics, statistical inference, econometric modelling and general economic knowledge of macro- and microeconomics phenomena analysis is demanded. 2. Skills: abilities to determining descriptive parameters in statistics, drawing conclusions from data deriving from random sample, interpreting analysis results and drawing logical conclusions as a result of inductive reasoning. 3. Competencies (Attitudes): Student is aware of advantages and disadvantages of using statistical computer software.				
LEARNING OUTCOMES						
Category	No.	Code	Description	Ref. to programme benchmarks		
knowledge	1	EP1	Student is aware of advantages and disadvantages of using selected statistical software	K_W08		
	2	EP2	Student knows methods and tools in the processing and storage of information, and is able to prepare and analyse statistical data	K_W06 K_W10		
	3	EP3	Student knows assumptions, methods and tools of economic phenomena forecasting	K_W08 K_W10		
skills	1	EP4	Student is able to use his knowledge about statistical software applications such as Analysis ToolPak and R language in order to analyse real economic phenomena and processes	K_U06 K_U10		
	2	EP5	Student is able to analyse causes and course of economic phenomena using statistical software applications such as Analysis ToolPak, or R language in the right way	K_U10		
	3	EP6	Student is able to forecast economic phenomena using statistical software applications such as Analysis ToolPak, or R language in the right way	K_U10		
social competences	1	EP7	Student understands the need of continual learning because of permanent computer tools and statistical software development	K_K02		
	2	EP8	Student realizes that the statistical software is highly important in real economic applications	K_K02		
CONTENT					Semester	No. of hours
						w tym e-learning
Subject title: zastosowania pakietów statystycznych (statistical software applications)						

Format of instruction: laboratory					
1. Methods of distribution analysis for economic variables, using statistical software called Analysis ToolPak (in Excel). Statistical data preparing and analysis with the use of tools such as Histogram, Descriptive Statistics, Rank and Percentile.		4	4	0	
2. Regression and correlation analysis for economic variables, using Analysis ToolPak's tools such as Covariance, Correlation, Regression.		4	4	0	
3. The probability determining for selected distributions of random variables and statistical hypothesis verification with the use of Analysis ToolPak's tools such as Random Number Generation, Sampling, Analysis of Variance (ANOVA): Single Factor, Two-Factor with Replication, Two-Factor without Replication. F-test Two Sample for Variance, t-test: Paired Two Sample for Means, t-test: Two-Sample Assuming Equal Variances, t-test: Two-Sample Assuming Unequal Variances, z-test: Two Sample for Means.		4	2	0	
4. Application of R language using in the distribution analysis for economic variables.		4	4	0	
5. The probability determining for selected distributions of random variables and statistical hypothesis verification with the use of R language, such as: Analysis of Variance (ANOVA): Single Factor, Two-Factor with Replication, Two-Factor without Replication. F-test Two Sample for Variance, t-test: Paired Two Sample for Means, t-test: Two-Sample Assuming Equal Variances, t-test: Two-Sample Assuming Unequal Variances, z-test: Two Sample for Means.		4	4	0	
6. Correlation and regression analysis in R language		4	4	0	
7. Time series and forecasting in R language: trend analysis, analysis of seasonality and exponential smoothing models.		4	2	0	
8. Measuring the similarity. Multivariate statistical analysis: Cluster analysis, factor analysis, classification trees and linear ordering. Application of GDM in R software environmental.		4	6	0	
Modes of delivery	Education methods: A short introduction to the lesson as a multimedia presentation (15-20 min.), explaining the main goal of laboratories and problems to sort out. The rest of lessons - computer work supervised by teacher.				
Assessment methods				No. of learning outcome from the syllabus	
	PROJEKT			EP1,EP2,EP3,EP4,EP5,EP6,EP7,EP8	
Metody i formy weryfikacji efektów uczenia się mogą zostać zmienione dla studentów ze szczególnymi potrzebami na warunkach i zasadach określonych w Regulaminie Studiów Uniwersytetu Szczecińskiego.					
Grading criteria	Students are assessed on the basis of the project. Its completeness and correctness is taken into account. Students receive grade 3.0 if they obtain at least 50% of total number of points from the project. Students receive grade 3.5 if they obtain at least 70% of total number of points from the project. Students receive grade 4.0 if they obtain at least 80% of total number of points from the project. Students receive grade 4.5 if they obtain at least 90% of total number of points from the project. Students receive grade 5.0 if they obtain at least 95% of total number of points from the project.				
	Grade calculation principles				
	The final grade is equal to the grade obtained from laboratories.

Course / module coordinator		dr AGNIESZKA BRETYN				
Course instructor		dr AGNIESZKA BRETYN				
Course / module objectives		The aim of the course is to familiarize the student with the behavioral perspective of economics and the selected possibilities of applying this field in practice. Students learn about the interdisciplinary trend in economics in order to understand the actual, not abstract, behavioral models of economic life participants and the selected possibilities of applying this field in practice.				
Prerequisites		Basic knowledge of economic phenomena occurring in the economy; Basic knowledge of economics				
LEARNING OUTCOMES						
Category	No.	Code	Description	Ref. to programme benchmarks		
knowledge	1	EP1	The student knows the concepts and theories of behavioral economics using an interdisciplinary approach in the analysis of behavioral models of economic life participants	K_W01 K_W03		
	2	EP2	The student knows and characterizes the key behavioral determinants influencing the process of evaluation and making economic decisions	K_W03 K_W04		
	3	EP3	The student knows and describes the stages of designing an economic experiment	K_W07		
skills	1	EP4	The student designs decision situations with the use of economic experiment	K_U04		
	2	EP5	the student is able to recognize, analyze and evaluate behavioral factors in the decision-making process	K_U05		
	3	EP6	the student has the ability to show and evaluate the complexity and variety of factors influencing economic behavior	K_U01 K_U02 K_U03		
social competences	1	EP7	The student is ready to get involved in the preparation of the project - economic experiment and presents the results of the team's work	K_K03		
	2	EP8	the student demonstrates a willingness to discuss the behavioral aspects of economic activities	K_K01 K_K02 K_K04		
CONTENT					Semester	No. of hours
						w tym e-learning
Subject title: Behavioral economics (ekonomia behawioralna)						

Format of instruction: lecture					
1. Relations between economics and psychology		3	1	0	
2. The genesis of behavioral economics and main research areas.		3	1	0	
3. Economic experiment as a tool for designing a decision situation.		3	2	0	
4. Cognitive limitations of an individual - heuristics and cognitive errors in assessing and making decisions		3	2	0	
5. Preferences and behavior in conditions of uncertainty and risk. Perspective theory and its implications.		3	2	0	
6. Behavior in economic games.		3	2	0	
7. Behavioral macroeconomics.		3	2	0	
8. Social preferences and their impact on economic activities - fair play, altruism, trust		3	1	0	
9. Nudges - architecture of choice		3	2	0	
Format of instruction: discussion classes					
1. Moral and social values in economic behavior.		3	1	0	
2. Mood and emotions in the process of making economic decisions		3	1	0	
3. Mental abbreviations and cognitive distortions in economic behavior		3	2	0	
4. Games in testing economic behavior		3	2	0	
5. Analysis of macroeconomic phenomena - behavioral approach		3	3	0	
6. Economic socialization.		3	1	0	
7. Neuroeconomics.		3	1	0	
8. Presentation of group projects concerning selected decision situations - evaluation of the results of an economic experiment.		3	3	0	
9. Review and summary		3	1	0	
Modes of delivery	<ul style="list-style-type: none"> - lecture with the use of multimedia techniques - lecture with elements of conversations - case studies, - work in groups - performing an economic experiment

Course / module coordinator		dr IZABELA SZAMREJ-BARAN				
Course instructor		dr IZABELA SZAMREJ-BARAN				
Course / module objectives		Acquisition of knowledge and skills in socio-economic policy and preparation for the development of students' own professional knowledge and skills.				
Prerequisites		The scope of knowledge, skills and competences appropriate for subjects in economics or macroeconomics				
LEARNING OUTCOMES						
Category	No.	Code	Description	Ref. to programme benchmarks		
knowledge	1	EP1	The student has broad knowledge of socio-economic policy issues	K_W01 K_W04		
	2	EP2	Student defines the most important social processes and recognizes their connections with the economy;	K_W03 K_W09 K_W12		
	3	EP3	Student explains the socio-economic functions of the state and local authorities.	K_W05		
skills	1	EP4	Student observes, describes, and interpretes selected socio-economic processes, analyzes the reasons of these processes	K_U01 K_U07		
	2	EP5	Student uses theoretical concepts to explain the relationship between the state and the market and society in modern economies.	K_U02 K_U04		
	3	EP6	Student can actively participate in organizations' / teams' work fulfilling socio-economic goals	K_U06		
social competences	1	EP7	Student recognizes the importance of social behaviour, has the ability of empathy for people in need	K_K03		
	2	EP8	Student is prepared and open to developing their own knowledge and professional skills.	K_K01 K_K04

	Metody i formy weryfikacji efektów uczenia si mog zosta zmienione dla studentów ze szczególnymi potrzebami na warunkach i zasadach okre lonych w Regulaminie Studiów Uniwersytetu Szczeci skiego.				
Grading criteria	Classes passing is based on the project, which verifies learning effects for the course in terms of abilities and social competence. Lectures passing is based on the multiple choice test, which verifies learning effects for the course in terms of knowledge. Student passes the final exam, if he/she realizes teaching effects at least at satisfactory level. Lecturer assigns points for each teaching effect realized. Total number of points decides how high the grade is. It means that if the total amount of points in comparison with maximal number of points belongs to <60%-70%), then the grade is 3,0; <70%-75%) - grade is 3,5; <75-85%) - grade is 4,0; <85%-90%) - grade is 4,5; <90%-100%> - grade is 5,0.				
	Grade calculation principles				
	The final grade of the course is arithmetical mean taken from lectures and classes grades.				
Final grade calculation method	Sem.	Course	Type of credit	Grade calc. method	Weight for the average

Modes of delivery	Seminar and lectures using the case study method for the practical analysis of the behavior of entities on the labor market: employers and employees				
Assessment methods				No. of learning outcome from the syllabus	
	SPRAWDZIAN			EP1,EP2	
	PROJEKT			EP1,EP2,EP3,EP4	
Metody i formy weryfikacji efektów uczenia si mog zosta zmienione dla studentów ze szczególnymi potrzebami na warunkach i zasadach okre lonych w Regulaminie Studiów Uniwersytetu Szczeci skiego.					
Grading criteria	Passing the exercises based on the preparation and presentation of the project (multimedia presentation). The final grade results from 3 elements: the quality of the material presented and compliance with the content of the course (70%), the method of preparation of the presentation - technical quality (10%), the method of presentation - preparation for the speech (20%)				
	Completion of the lecture based on the solution of the theoretical test in the e-learning system.				
	Grade calculation principles				
The final grade for the subject is the arithmetic mean of grades from exercises and lectures					
Final grade calculation method	Sem.	Course	Type of credit	Grade calc. method	Weight for the average
	3	Employer and employee in the labor market (pracodawca i pracownik na rynku pracy)		Nieobliczana	
	3	Employer and employee in the labor market (pracodawca i pracownik na rynku pracy) [wykład]	zaliczenie z ocen		
	3	Employer and employee in the labor market (pracodawca i pracownik na rynku pracy) [wiczenia]	zaliczenie z ocen

Course / module coordinator		dr AGATA WAWRZY尼亚K				
Course instructor		dr AGATA WAWRZY尼亚K				
Course / module objectives		<p>The course provides an introduction to the methodology, assumptions, and main findings of neuroeconomics. economics, psychology, and neuroscience are converging today into a unified discipline of neuroeconomics with the ultimate aim of creating a single, general theory of human decision-making. Neuroscience, when allied with psychology and economics, creates powerful new models to explain why we make decisions. Neurobiological mechanisms of decision-making, decisions under risk, trust and cooperation will be central issues in this course. The objective of this course is to acquire knowledge and skills in the field of neuroeconomics and to prepare students for creative activities in a group.</p>				
Prerequisites		Basic knowledge of economics.				
LEARNING OUTCOMES						
Category	No.	Code	Description	Ref. to programme benchmarks		
knowledge	1	EP1	The student knows and understands the world scientific achievements regarding neuroeconomics and its importance for economic practice on an international scale	K_W01

Course / module coordinator		dr hab. TOMASZ BERNAT					
Course instructor		dr hab. TOMASZ BERNAT					
Course / module objectives		The main aim of the lecture is, on the one hand, to familiarize students with the basic concepts and concepts that characterize the contemporary way of thinking of managers about the market, their institutions, structure and results - on the other hand, to use the theory and methods of economics (especially microeconomics) to solve problems related to undertaking optimal decision. Setting the analyzed issues on specific examples will enable students to use the acquired knowledge not only in the activities of enterprises, but also in the public sector and all kinds of organizations, as well as by anyone who, in their personal decisions of financial, economic, etc., looks for the best solutions for themselves.					
Prerequisites		The student knows the principles of microeconomics and macroeconomics as well as the principles of functioning of the market economy, the student is familiar with current economic events. The student is able to solve basic tasks in the field of mathematics and use (correctly interpret) graphs showing the relationships between the main categories that are the subject of economic analyzes in the enterprise. The student is able to think analytically, correctly formulate conclusions based on his knowledge about the functioning of enterprises.

Course / module coordinator		dr hab. TOMASZ BERNAT				
Course instructor		dr hab. TOMASZ BERNAT				
Course / module objectives		The aim is to acquire knowledge and skills related to the use of advanced theory of microeconomics to solve decision problems and to present optimization problems, use calculus to solve these optimization problems, use economic reasoning to explain the strategic choices of individuals or organizations. In addition, the student is prepared to communicate freely in English in an international group of people in order to carry out tasks and business projects.				
Prerequisites		The student knows the basics of economics and the principles of microeconomy, student is oriented in current economic events. Students are able to solve the basic tasks of mathematics and use (properly interpreted) graphs showing the relationship between the main categories, which are subject to economic analysis. The student is able to think analytically, properly formulate conclusions based on their knowledge of the news of economic life.				
LEARNING OUTCOMES						
Category	No.	Code	Description	Ref. to programme benchmarks

Course / module coordinator		dr hab. ANNA TURCZAK				
Course instructor		dr hab. ANNA TURCZAK				
Course / module objectives		<p>Decision-making involves trying to make the most effective use of limited resources. Resources include money, time, space, raw materials, labour, machinery, etc. In all these examples of resources, decision-makers need to identify the best option concerning allocation, i.e., find the optimal solution. The main aim of the course is to provide students with thorough knowledge on some methods and techniques of optimization used in economics and finance. In particular, the objective of the course is to familiarize students with linear programming, which is an indispensable tool in making the right decisions. Linear programs are applicable to a great number of practical problems related to the conduct and coordination of many operations and activities. Students will gain the ability to construct specific decision models, as well as develop their analytical and logical thinking skills.</p>				
Prerequisites		<p>It will be better for students to be well versed in mathematics, microeconomics, corporate finance and some elements of statistics. Knowledge of basic English terminology used in economics and finance is required.</p>				
LEARNING OUTCOMES						
Category	No.	Code	Description	Ref. to programme benchmarks		
knowledge	1	EP1	To list the steps of the decision-making process; to know advanced research methods and understand their usefulness in effective decision-making; to learn how to structure a given research problem and select the appropriate procedure in a practical situation.	K_W09 K_W11		
	2	EP2	To be familiar with the basic assumptions and properties of linear programming; to understand the difference between feasible and optimal solutions.	K_W03 K_W11		
	3	EP3	To become acquainted with the common queuing models and correctly describe the basic queuing system configurations.	K_W09 K_W11		
	4	EP4	To understand the importance of inventory control; to comprehend the concept of safety stock; to be prepared to perform ABC analysis; to know how to properly determine the reorder point and compute the economic order quantity.	K_W05 K_W09 K_W11		

skills	1	EP5	To formulate a variety of small to large linear programs; to have the ability to use graphical solution procedures for linear programs.	K_U04
	2	EP6	To set up and solve both maximization and minimization linear programming problems with simplex tableaux; to be able to conduct sensitivity analysis; to interpret the meaning of numbers in a simplex tableau.	K_U01 K_U02 K_U04
	3	EP7	To suggest and use adequate methods to find the initial solution and the optimal solution; to handle transportation, assignment, facility location problems.	K_U01 K_U04
	4	EP8	To be capable of calculating the rate of return and estimating risk; to realize the risk-return trade-off.	K_U02 K_U04
social competences	1	EP9	To be eager to apply optimization methods in real situations; to want to continuously improve and develop the capability to analyse data; to be willing to evaluate the results obtained and formulate own conclusions.	K_K01 K_K02 K_K04
	2	EP10	To be ready to solve complex economic and financial problems using advanced methods and tools; to be aware of the advantages and limitations of the methods and tools used.	K_K01 K_K02

CONTENT	Semester	No. of hours

Subject title: **Optimization of Economic and Financial Decisions (optymalizacja decyzji ekonomicznych i finansowych)**

Format of instruction: **lecture**

1. Scientific approach to decision-making. Formulating the problem. Defining the variables. Acquiring input data. Constructing the model. Deriving the solution. Interpreting the results. Modelling in the real world. Implementation. Decision-making under uncertainty. A survey of risk concepts. Decision-making under risk.	2	2	0
2. Fundamentals of linear programming. Constraints and the objective function. Graphical method, the simplex algorithm, duality and sensitivity analysis. The product mix problem as one of the most common linear programming applications.	2	4	0
3. Waiting lines - basic concepts and definitions. Characteristics of queuing systems. Development of queuing models. Single-channel queuing models. Multiple-channel queuing models. Average number of customers in the system. Time spent in the system. Measurement of costs. Service efficiency. The use of more complex queuing models in practical situations.	2	2	0
4. Inventory decisions. Raw materials, work-in-process, finished goods as examples of stocks. Inventory models commonly used in practice. Economic order quantity. Reorder point. Quantity discounts. Irregular supply and demand. Using safety stock.	2	2	0
5. Introduction to transportation and assignment problems. Balanced and unbalanced problems. Finding the first feasible solution. Improving the basic feasible solution. Decisions regarding facility location (new warehouse, factory, office).	2	2	0
6. Risk-return approach to analysing investments. Standard deviation of returns as a measure of risk. Two components of total risk: systematic risk and unsystematic risk. A portfolio as an investment made up of a group of assets. Diversification based on correlation coefficients between rates of return. Efficient portfolios.	2	3	0

Format of instruction: **laboratory**

1. Models in which the mathematical expressions appearing in the objective function and constraints are linear functions. Profit maximization. Revenue maximization. Cost minimization. Using a twodimensional graph to illustrate the solutions of linear programs. Determining how many units of each product should be produced in order to maximize profit or revenue.	2	4	0
2. Economics of queuing systems. Constructing arrival and service time distributions. Poisson arrivals. Exponential service time. Constant service time model. Single-channel and multiple-channel systems. Cost analysis. Simulation of queuing systems.	2	4	0
3. Deterministic and probabilistic inventory models. Quantity discount models. Estimating the economic order quantity based on the criterion of total cost minimization. Determining how often to order and when to order. ABC analysis.	2	2	0

4. The problem of optimal distribution of goods from several points of supply to a number of points of demand. Determining the most efficient assignment of people to projects, salespeople to territories, contracts to bidders, jobs to machines, and so on. Facility location optimization.		2	2	0	
5. Rate of return maximization. Risk minimization. Portfolio diversification. The kind of risk that cannot be diversified away. The sort of risk that can be reduced by diversification. Principles of combining assets into portfolios. The efficient portfolio as a portfolio that cannot be improved from the viewpoint of risk and expected rate of return.		2	3	0	
Modes of delivery	The theoretical issues are presented with the use of multimedia techniques. The way of teaching is interactive. Students acquire knowledge and then analyse many practical cases, solve additional exercises and take tests. All didactic materials have been prepared in electronic form and are provided to students via the Internet.
